

Flashers®

The flexible flashing
that lasts for years
but installs in minutes.

Flashers®, by West Coast Washers, Inc., make flashing jobs easier. Easier to order – easier to install.

Flashers come in nine different sizes for pipes ranging from 1/4" to 19" in diameter and are available in EPDM or silicone for high temperature applications. Flashers make installation a breeze on any kind of roofing.

With Flashers, custom fabrication and time-consuming fittings are a thing of the past.

Flashers require no special tools or complicated installation methods.

The rubber cone is clearly marked with pipe dimensions, in both inches and millimeters, so it can be easily customized with tin snips or scissors.

Flashers' flexible rubber won't crack and allows for expansion, contraction, and pipe vibration. The heavy rubber fold at the base allows them to fit any roof style.

So save time and money – do it the easy way
– use Flashers on your next job.
