1. Theoretical section properties for steel panels have been calculated per AISI S100 Specification for Design of Cold-Formed Steel Structural Members.
2. Charted load/Span values are based on ASTM E1592-05 (2017) testing protocol.
3. Charted allowable uniform loads are based on the ultimate uniform load (per ASTM E1592-05 testing) divided by 2.00 factor-of-safety
4. Panel substrate (structure) may include: open-framing, plywood/OSB, or metal deck.

1. Theoretical section properties for steel panels have been calculated per 2020 AISI S100 Specification for the Design of Cold-Formed Steel Structural Members.
2. Theoretical section properties for aluminum panels have been calculated per the latest edition of the aluminum association design manual.
3. Allowable load is calculated in accordance with 2020 AISI S100 specifications considering bending, shear, combined bending and shear deflection. Allowable load considers a 3 or more equal span condition.
4. Allowable load includes web crippling.

FASTENER DIAGRAM

PANEL ATTACHMENT

Fastener Notes:

- When possible, lap panels away from prevailing wind direction.
- 15/32" OSB: #14 GP Neoprene Washered fastener. Screws should be long enough to penetrate through the bottom of the plywood by 3/8".
- 15/32" Plywood: #14 GP Neoprene Washered fastener. Screws should be long enough to penetrate through the bottom of the plywood by 3/8".
- Dimensional lumber: #10 GP. Screws should penetrate the lumber 1".
- 16GA (or less) steel furring: #12 Fastener with DP-1
- Sidelaps fasten with #14 LapTek screws.
- All trim screws used for roof or wall applications should have EPDM sealing washers.
- Fastener spacing is based on project specific structural requirements. Consult a licensed engineer.
